DETAILED ACTION

Allowable Subject Matter

1. Claims 46-56 are allowed.
2. The following is an examiner's statement of reasons for allowance: The prior art fails to teach or disclose a method for biological burden reduction that includes the steps of first applying a continuous stream of O_x gas to a material in a biological burden reduction chamber, wherein the O_x gas comprises O_1 , O_2 and O_3 and then applying a vacuum within the reduction chamber and simultaneously withdrawing the O_x gas.

The closest prior art to the applicant's claimed invention is Caputo et al. (U.S. 5,244,629) and Burleson (U.S. 4,640,782).

Burleson discloses a method for the generation and utilization of ozone and singlet oxygen. The apparatus comprises a means to convert O_2 into constituents of ozone (O_3) and singlet oxygen (O_1) and then pass the constituents to a treatment chamber and use the constituents to kill pathogens found on medical instruments and containers.

Caputo et al. disclose a plasma sterilization process that includes creating a vacuum inside of the treatment chamber and exposing an article to a plasma treatment.

However, neither of the above references, alone or combined, teach or fairly suggest a method for biological burden reduction that includes the steps of first applying a continuous stream of O_x gas to a material in a biological burden reduction chamber,

wherein the O_x gas comprises O₁, O₂ and O₃ and then applying a vacuum within the reduction chamber and simultaneously withdrawing the O_x gas.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
